ABSTRACT

At present time when a new generation of TeV energy colliders is beginning to operate one needs to calculate cross sections for a great number of various reactions. The CompHEP package was created for calculation of multiparticle final states in collision and decay processes. The main idea in CompHEP was to enable one to go directly from the Lagrangian to the cross sections and distributions effectively, with the high level of automation.

While ortodox event generators are software libraries (see [Event generator](#)) of various matrix elements, CompHEP starts from the level of Feynman rules for a gauge model Lagrangian and calculates symbolically the matrix element for any process defined by a user. In this sense CompHEP is a “generator of generators” (or, following the abovementioned reference, a “meta-generator”). The Feynman rules for a gauge model Lagrangian in the format of CompHEP model files can be generated by [LanHEP](#).

News

- 07/10/2014 CompHEP source is available without registration and login through the [link](#).
- 09/12/2013 Available CompHEP v4.5.2rc is the latest stable release.
- 01/02/2013 Available CompHEP v4.5.2rc11 as the latest which fixes all of the reported problems.
- 31/12/2010 Available CompHEP v4.5.1 as a RPM package for CentOS and Fedora.
- 16/03/2009 New official version of CompHEP (4.5.1) is available. It is a bug-fixed version.
- 05/02/2009 New official version of CompHEP (4.5.0) is available.
- 19/08/2008 [42 of the Best Free Linux Scientific Software](#). CompHEP is on the first place in Physics category.
- 13/06/2008 Users are invited to place an information about models in CompHEP format at [users model library](#).
- 17/05/2008 Current [HEP allocations](#) for Cray XT3 Jaguar, National Center for Computational Sciences. “Monte Carlo Simulation and Reconstruction of CompHEP—Produced Hadronic

Backgrounds to the Higgs Boson Diphoton Decay in Weak-Boson Fusion Production Mode".
